~~Computer Aided Design - What is it? How does it work? Why ...~~

The phrase Computer Aided Design (CAD) means the use of computer software to facilitate the generation, modification, and optimisation of a part or a compilation of parts. Using software to facilitate part design allows for higher precision, simpler and more accurate design iterations, and comprehensive documentation for part and / or project management (e.g. integration with a traditional bill of materials).

Computer-Aided Design (CAD) is the use of an application to help create or optimize a design. Therefore, CAD software allows engineers, architects, designers, and others to create precision drawings or technical illustrations in 2D or 3D.
