Other blood tests help determine whether the disease is causing any serious complications. Some blood tests can take several days to complete, while others can produce results in less than 15 minutes. Treatment. Malaria is treated with prescription drugs to kill the parasite. The types of drugs and the length of treatment will vary, depending on:

Malaria - Diagnosis and treatment - Mayo Clinic

Many signs and symptoms of Lyme disease are often found in other conditions, so diagnosis can be difficult. What's more, ticks that transmit Lyme disease can also spread other diseases. If you don't have the characteristic Lyme disease rash, your doctor might ask about your medical history, including whether you've been outdoors in the summer where Lyme disease is common, and do a physical exam.

Lyme disease - Diagnosis and treatment - Mayo Clinic

Key Difference: Diagnosis is the act of identifying the illness or disease by analyzing and examining the associated symptoms. Treatment is an umbrella term which is used to denote all the methods applied in order to cure the diagnosed ailment or reduce the effects generated by the disease or disorder.

Difference between Diagnosis and Treatment | Diagnosis vs ...

DOCTORS: Click here for the Professional Version Infectious diseases are caused by microorganisms, such as bacteria, viruses, fungi, and parasites. Doctors suspect an infection based on the person's symptoms, physical examination results, and risk factors. First, doctors confirm that the person has an infection rather than another type of illness.

Diagnosis of Infectious Disease - Infections - MSD Manual ...

A refractory disease is a disease that resists treatment, especially an individual case that resists treatment more than is normal for the specific disease in question. Subclinical disease Also called silent disease, silent stage, or asymptomatic disease. This is a stage in some diseases before the symptoms are first noted. Terminal phase
